<h1>

Classification of Arrhythmia

Prediction

</h1>

<h3>

According to the World Health Organization (WHO), cardiovascular diseases (CVDs) are the number one

cause of death

today. Over 17.7 million people died from CVDs in the year 2017 all over the world which is about

31% of all deaths, and

over 75% of these deaths occur in low and middle-income countries.

Arrhythmia is a representative

type of CVD that

refers to any irregular change from the normal heart rhythms. There are several types of arrhythmia

including atrial

fibrillation, premature contraction, ventricular fibrillation, and tachycardia.

Although a single

arrhythmia heartbeat

may not have a serious impact on life, continuous arrhythmia beats can result in fatal

circumstances.

</h3>

```

```
<div class="bannerText" data-aos="fade-right" data-aos-duration="1000">
```

```
<h1>
```

Normal

```
</h1>
```

```
<p>Note that the heart is beating  
in a regular sinus rhythm
```

between 60-100 beats per
minute (specifically 82 bpm).

All the important intervals
on this recording are within
normal ranges.

The normal ECG
patterns seen in children
differ considerably from those
in adults.

Premature Atrial Contraction

usually, premature atrial contraction have
no clear cause and no health risks. In most
cases, premature atrial contractions aren't a
sign of heart disease and just happen
naturally.

But some people who have PACs turn out to
have related heart conditions, such as
Cardiomyopathy (a weakened heart muscle)
Coronary heart disease (fatty deposits in your blood vessels)

```
<div class="bannerImg" data-aos="fade-up" data-aos-duration="1000">
```

```
  
```

```
</div>
```

```
</div>
```

```

```
      Premature Ventricular Contractions
```

```
    </h1>
```

```
    <p>Extra, abnormal heartbeats that begin in one of the
```

```
      Heart's two lower chambers.</p>
```

```
    <p>Premature ventricular contractions (PVCs) occur
```

```
      in most people at some point. Causes may include certain
```

```
      medication, alcohol, some illegal drugs, caffeine,
```

```
      tobacco, exercise or anxiety.</p>
```

```
    <p>
```

```
      PVCs often cause no symptoms. When symptoms do
```

```
      occur, they feel like a flip-flop or skipped-beat
```

```
      sensation in the chest.
```

```
    </p>
```

```
    <p>Most people with isolated PVCs and an otherwise
```

```
      normal heart don't need treatment. PVCs occurring
```

```
      continuously for more than 30 seconds is a
```

```
      potentially serious cardiac condition known as
```

```
      ventricular tachycardia.</p>
```

```
  </div>

                </h1>
                <h3>

```

In this project, we build an effective electrocardiogram (ECG) arrhythmia classification method

using a convolutional

neural network (CNN), in which we classify ECG into seven categories, one being normal and the other

six being different

types of arrhythmia using deep two-dimensional CNN with grayscale ECG images. We are creating a web

application where

the user selects the image which is to be classified. The image is fed into the model that is

trained and the cited

class will be displayed on the webpage.

Classification of Arrhythmia

Prediction

###

According to the World Health Organization (WHO), cardiovascular diseases (CVDs) are the number one

cause of

death today. Over 17.7 million people died from CVDs in the year 2017 all over the world which...
